

## INSTALLATION INSTRUCTIONS

① To be installed by a qualified electrician in compliance with the local building and electrical codes. Before installing turn off power.

② For outdoor applications, use the included gasket. For indoor applications, gasket is not required. Make wire connections inside of the single gang box. It is the responsibility of the contractor to supply the appropriate junction box for the application (ie. concrete rated for use in concrete). Fits in a standard single gang box. Mount the light engine to the single gang box using the screws provided.

③ Place trim over the top of the light engine. Attach the trim with the provided hex key using the pre-installed screws on each side of the trim.

④ Turn power back on.

**Installation is the same for the vertically orientated step light.**
